DESCRIPTION

Tobacco remains the leading cause of death and disease in the US, however, nicotine addiction is not the only substance misuse concern among the public health community. Let's meet and hear about the distinctions between the two and then how we can work to assist in recovery together. In the afternoon, we will have an expert panel for open discussion on your personal experiences.

Objectives:

- Discuss the issue of tobacco use among those addicted to opioids
- Explore the relationship between these addictions and behavioral health/chronic disease
- Identify opportunities for regional health agencies to collaborate internally to address nicotine and opioid addiction, across tobacco, chronic disease, injury prevention, behavioral health, and other programs

DAILY & INTERMITTENT SMOKERS ARE 3X MORE LIKELY TO REPORT PAST-YEAR NONMEDICAL PRESCRIPTION OPIOID USE!

DATE AND TIME

Fri, May 25, 2018
9:30 AM – 3:00 PM EDT
